

Get Current on Industrial and Construction Stormwater in Utah

Here it is! Utah Stormwater - what it's all about. South Towne Expo Center, 9575 S. State Street, Sandy, Utah, Hall1, **October 21-22, 2009** with special CPESC class on October 20,2009.

Booth and Vendor displays of the latest information and materials for stormwater for both industrial and construction sites and facilities. Learn what is happening and what is available in your community.

In addition to the stormwater vendor booths and exhibits, there will be education classes for construction stormwater and industrial stormwater. Come and learn what is required and how best to do it. Learn from the masters. Meet the experts. Ask the questions - get the answers.

FLASH!!! New Registered Stormwater Inspector (RSI) class will be given at the Expo. First time to be offered to the public. See the description inside.

Stormwater compliance is part of the United States Clean Water Act and is administrated under the EPA. The state of Utah has jurisdiction over Stormwater in Utah under EPA Region 8. With Utah being a high desert area, water is of vital importance. Keeping drinking water, recreation waters and fishing waters clean is a high priority. Understanding what is required under the Stormwater regulations is important to all Utah citizens.

Special requirements have been established for contractors and developers as well as industrial facilities under many Standard Industrial Codes (SIC). Failure to comply with these regulations can place a business in non-compliance and subject to serious fines.

The Utah Stormwater Expo '09 will bring all the information you need together in one great event. Don't miss it.
